My Unicom TIC Journey

I stepped into the world of tech with nothing but curiosity.
Not a single programming concept.
Not a tech background.
Just a Bio student with basic O/L IT knowledge and a stubborn passion to learn something new.

After A/Ls, I kept searching for a way into IT. I didn't know where to begin or what path to take. That's when one brother mentioned Unicom TIC. I applied immediately half excited, half unsure if I would even be selected.

When the acceptance email arrived, everything shifted.
A new field.
New people.
A completely new culture.
And I was finally stepping into it.

Programming wasn't gentle with me at the beginning.
Frontend was actually fine for me in the start I could manage it.
But the moment we stepped into JavaScript and the logical side of things, that's where I really struggled. No matter how many people said it was easy, it felt tough, and there were moments when I wondered if I could ever become a developer.

Then came backend.
That's where everything changed.
I finally felt connected to programming the logic, the structure, the depth. And slowly, as I grew, frontend didn't look like a monster anymore. I started enjoying it too.

I can't talk about my journey without mentioning Dr. Neil**.**
His guidance, his energy, his way of explaining things it motivated me every single time. He taught lessons I still hear in my head whenever I make decisions. Not just technical lessons, but the kind that shape how you think.

And then there's Shantha sir**.**
His BRD sessions, the communication training, the fearless speaking that's where my confidence grew. The person I am today, both technically and personally, was shaped in those rooms.

Of course, the journey wasn't smooth.
Presentations terrified me.
Mentoring projects pushed me outside every comfort zone I had.
But those experiences broke barriers I never even recognized in myself.

I've never been the type to speak to everyone. I keep a small circle, a quiet space where I feel safe. At Unicom TIC, I did the same at first — found my few people and stayed in my comfort zone. Over time, though, something shifted. Being there helped me open up little by little. I started talking to more people, connecting more, and watching my personality grow in ways I didn't expect.

Unicom TIC became the seed that started my entire career.
Today, I'm working at Unicorn Connected Apps, learning something new every single day. New technologies, new skills, new challenges. And it's exciting. Hard, yes. But exciting.

If this journey has taught me one truth, it's this:
Every late night you stay up.
Every bit of hard work.
Every small effort you put into learning…
It all comes back to you. Sometimes quietly, sometimes unexpectedly but it always comes.

I'm grateful for Dr.Neil**,** Shantha sir, the Unicom TIC staffs, our lecturers, and my fellow students.
They shaped the foundation that carries me today.

And the journey is still just beginning.
